CSS Animation & Transition

Practical Assignment Brief • Recreate five reference websites as closely as possible

Assignment objective

Build the five linked reference websites using HTML and CSS, paying close attention to layout, spacing, typography, colors, sizing, and interactive motion. The goal is to reproduce the visible design as accurately as possible while demonstrating correct use of CSS **transitions** and **animations**.

Reference websites

Assignment 1: https://inspiring-syrniki-41d36b.netlify.app/

Assignment 2: https://stalwart-druid-a2a0cd.netlify.app/

Assignment 3: https://animated-wisp-07e6ff.netlify.app/

Assignment 4: https://vermillion-pegasus-c0b064.netlify.app/

Assignment 5: https://sunny-paprenjak-cbcc3c.netlify.app/

Instructions

• **1. Inspect each reference.** Open the link in a browser and observe the full page, including hover states, animations, transitions, and responsive behavior.

• **2. Recreate the design.** Match the structure, alignment, spacing, font sizes, colors, borders, shadows, and image proportions as closely as possible.

• **3. Implement motion with CSS.** Use `transition` for smooth changes caused by hover/focus or another state change, and `@keyframes` with `animation` for effects that run automatically or repeat.

• **4. Keep the design faithful.** Do not add unnecessary gradients, extra decorations, or unrelated effects that are not present in the reference.

• **5. Make it responsive.** Check the page at desktop and mobile widths. Prevent overlapping text, overflowing cards, and broken layouts.

• **6. Test before submitting.** Check links, buttons, hover states, animation timing, and the browser console for errors.

Technical requirements

Requirement	What to demonstrate
HTML structure	Use semantic elements where suitable, such as header, nav, main, section, article, and footer.
CSS transitions	Apply transitions to appropriate interactive states, such as buttons, navigation links, cards, images, and menus.
CSS animations	Use named @keyframes for entrance effects, movement, loading effects, or other motion visible in the reference.
Transforms	Use transform properties such as translate, scale, or rotate when they match the reference behavior.

Requirement	What to demonstrate
Timing	Choose suitable duration, delay, timing-function, iteration-count, and direction values.
Responsive layout	Use flexible widths, Grid/Flexbox, and media queries where needed.
Accessibility	Keep text readable and include a prefers-reduced-motion alternative for non-essential motion.
Code quality	Use clear class names, consistent indentation, and avoid unnecessary duplicate CSS.

Deliverables

■ Submit five working website recreations—one for each reference link.

■ Include your HTML, CSS, and any local assets required to run the projects.

■ Organize files clearly. You may use one folder per assignment, or separate named files.

■ Submit a screenshot of each completed page and a live deployment link or repository link, if requested by the instructor.

■ Ensure each project opens and works without broken images or missing files.

Suggested folder structure

css-animation-assignments/
■■■ assignment-1/ (index.html, style.css, assets/)
■■■ assignment-2/ (index.html, style.css, assets/)
■■■ assignment-3/ (index.html, style.css, assets/)
■■■ assignment-4/ (index.html, style.css, assets/)
■■■ assignment-5/ (index.html, style.css, assets/)

Evaluation rubric (100 marks)

Criteria	Marks	Assessment focus
Visual accuracy	35	Layout, spacing, typography, colors, borders, images, and overall resemblance to the reference.
CSS transitions	15	Smooth and appropriate interactive state changes.
CSS animations	20	Correct @keyframes, timing, delays, iteration, and motion.
Responsive design	10	Usable layout on desktop and mobile screens.
Code quality	10	Readable structure, reusable styles, and consistent naming.
Testing and submission	10	All five projects work, assets load, and deliverables are organized.

Before you submit

■ All five reference links have been checked.

■ Each recreated page closely matches its reference.

■ Transitions work on hover/focus and animations run as intended.

■ The layout has been checked at desktop and mobile widths.

■ All files and assets are included and named clearly.

Important: The assignment is to recreate the reference websites, not simply to make a similar-looking page. Use the links above as the source of truth for the required visual appearance and behavior.
