MOCK / SAMPLE PAPER – MID TERM PRACTICE – PAPER 1 (REVISED)

Web Development (HTML & CSS)

Maximum Marks	30	Time	2 Hours
Course	Web Development	Practice Set	Revised Mock

Instructions:

- Attempt all questions.
- Section A contains 5 questions of 3 marks each. Section B contains 3 questions of 5 marks each.
- Write complete HTML/CSS wherever code is required and use meaningful indentation.
- Questions have been newly written to avoid duplication with the actual Mid-Term papers.

SECTION A – Short / Application-Based Questions

Attempt all questions. $5 \times 3 = 15$ Marks

Q1. A webpage needs three headings with different text alignments. Write CSS to make the first heading left-aligned, the second centered and the third right-aligned. In the same answer, show one example each of a color name, hexadecimal color and `rgb()` color value. [3 Marks]

Q2. A product label contains an icon, product name and price. Write a short HTML/CSS example and use `display: inline-block` so the three items can stay on the same line while accepting padding and a controlled width. Briefly state why `inline-block` is suitable here. [3 Marks]

Q3. A list contains eight `<li>` elements. Write CSS selectors to highlight the 3rd item, all odd-numbered items, all even-numbered items, and every 3rd item. Use appropriate `:nth-child()` expressions. [3 Marks]

Q4. An online article has a heading followed by a paragraph of text. Write CSS using `::first-letter` to create a drop-cap effect and `::first-line` to emphasize the opening line. Add a small "NEW" label before the heading using `::before` and a decorative symbol after it using `::after`. [3 Marks]

Q5. Create CSS for a `.book` card using a universal selector for `box-sizing`, a group selector for its heading and paragraph, and a class selector for the card itself. Apply padding, margin, border, border-radius, background-color and box-shadow. [3 Marks]

SECTION B – Descriptive / Integrated Questions

Attempt all questions. $3 \times 5 = 15$ Marks

Q6. Scenario – Library Book Catalogue: Create a complete HTML page for a college library catalogue. Include a page title and meta viewport, a semantic header and navigation, a main section with an introductory paragraph, an unordered list of library facilities, and a table containing at least four books with columns for Book Title, Author, Category and Availability. Add a link to the library contact page and a semantic footer. [5 Marks]

Q7. Scenario – Student Feedback Form: Build an HTML feedback form for a Web Development workshop. Include name, email, workshop rating using radio buttons, topics liked using checkboxes, a preferred session using a select element, comments using textarea, and Submit/Reset buttons. Use meaningful labels, suitable input types and appropriate form attributes. [5 Marks]

Q8. Scenario – Campus Announcement Banner: Create HTML for an announcement banner containing a heading, two paragraphs and a link. Write CSS that uses a tag selector, class selector, ID selector and group selector. Add `:hover` to the link, `:focus` to a form control placed below the banner, and `:first-child/:last-child` for the paragraphs. Use padding, margin, border, border-radius and box-shadow to complete the design. [5 Marks]
