MOCK / SAMPLE PAPER – MID TERM PRACTICE – PAPER 2 (REVISED)

Web Development (HTML & CSS)

Maximum Marks	30	Time	2 Hours
Course	Web Development	Practice Set	Revised Mock

Instructions:

- Attempt all questions.
- Section A contains 5 questions of 3 marks each. Section B contains 3 questions of 5 marks each.
- Write complete HTML/CSS wherever code is required and use meaningful indentation.
- Questions have been newly written to avoid duplication with the actual Mid-Term papers.

SECTION A – Short / Application-Based Questions

Attempt all questions. $5 \times 3 = 15$ Marks

Q1. A news webpage is divided into a top area, navigation area, main story, related content and bottom area. Name suitable semantic HTML5 elements for these five regions and write a small structural skeleton showing how they can be arranged. [3 Marks]

Q2. A form contains Name, Email and Phone Number fields. Write HTML for these three fields with correctly associated `<label>` elements and suitable input types. Do not create a registration/admission form. [3 Marks]

Q3. Consider a navigation structure where `<nav>` contains an unordered list and each list item contains a link. Write one selector using the descendant combinator and one using the child combinator. Then state exactly which elements each selector targets. [3 Marks]

Q4. A webpage contains four `<div>` elements that must appear as separate full-width rows. Write CSS using `display: block`. Then show how changing the same elements to `inline` would affect their placement. [3 Marks]

Q5. Write CSS for a `.notice` element whose background uses `rgb( )`, its border uses a hexadecimal color, and its text uses a named color. Add a hover state and use `text-align` to center the notice content. [3 Marks]

SECTION B – Descriptive / Integrated Questions

Attempt all questions. $3 \times 5 = 15$ Marks

Q6. Scenario – Restaurant Menu Webpage: Create the HTML structure for a small college-canteen menu. Include a semantic header and navigation, a main section with three menu categories, an unordered list under each category, a table showing three combo meals with prices, one food image with meaningful alternative text, and a footer. Use semantic elements where appropriate. [5 Marks]

Q7. Scenario – Team Member Cards: Create four team-member blocks containing a name, role and short description. Write CSS that (a) uses `:first-child`, `:last-child` and `:nth-child(3)` to apply different styles, (b) uses `::before` and `::after` to add decorative text, and (c) demonstrates padding, margin, border, border-radius and box-shadow. [5 Marks]

Q8. Scenario – Help Desk Form: Create a compact support form with Name, Email, Issue Type, Message and Submit button. Place the form inside a semantic `<section>`. Using CSS, demonstrate all four sibling/relationship combinators with a suitable small HTML structure: descendant, child, adjacent sibling and general sibling. Also add `:focus` styling to the input fields and `:hover` styling to the submit button. [5 Marks]
