LAB ASSESSMENT

SkillBridge – Career & Learning Portal

HTML & CSS Practical Lab | Suggested Time: 2.5–3 Hours | Total: 100 Marks

UI Reference: https://scintillating-llama-f6bf92.netlify.app/

1. Problem Statement

Create a responsive, single-page educational website called **SkillBridge**. The website should help students explore courses, view workshops, learn about career support, and read student testimonials. Use HTML5 and CSS3 to create a clean, professional interface. Use the deployment link above as your visual reference.

2. Required Website Sections

Navigation Bar: Brand/logo, Home, Courses, Career, Workshops, About Us links, and Sign In button. Use Flexbox and add hover effects.

Hero Section: Heading “Build Skills. Shape Your Future.”, short description, two buttons, and a learning-related image. Use Flexbox, a positioned floating badge, and an entrance animation.

Popular Courses: Six course cards: Full Stack, Java, Python, UI/UX, Data Structures, and Cloud Computing. Each card needs an image, title, level, duration, and link. Use Grid.

Why Choose SkillBridge?: Four feature cards: Industry Mentors, Practical Projects, Career Guidance, and Placement Assistance. Use Grid.

Upcoming Workshops: Three workshop cards showing date, title, time, mentor, and Register button. Add a positioned LIVE badge to one card.

Student Testimonials: Three cards with student image, name, role, short review, and rating. Use Grid.

CTA & Footer: Join SkillBridge call-to-action plus footer with description, quick links, contact details, and social links.

3. Mandatory CSS Concepts

Concept	Required Use
Flexbox	Navigation, hero alignment, workshop cards or button groups.
CSS Grid	Course, feature, and testimonial card layouts.
Positioning	Floating hero badge and LIVE badge; use relative and absolute positioning.
Media Queries	Responsive desktop, tablet, and mobile layouts.
Transitions	Smooth hover effects on buttons, links, cards, and images.
Animations	At least one @keyframes animation, e.g. hero entrance or LIVE badge pulse.
Transform	Use translate() or scale() for hover/animation effects.
Box Model	Use margin, padding, border, border-radius, and box-shadow.
Pseudo selectors	Use :hover / :focus and ::before / ::after.

4. Responsive & Technical Requirements

- Desktop: 3 course columns; tablet: 2 columns; mobile: 1 column. Adapt other sections to fit each screen.
- Use at least two media-query breakpoints. Avoid horizontal scrolling and keep text/images readable.
- Use semantic HTML5 elements and an external stylesheet named **style.css**.
- HTML and CSS only. No JavaScript, CSS frameworks, or prebuilt templates.
- Use meaningful class names, neat indentation, and alt text for meaningful images.

5. Suggested Project Structure

SkillBridge/ | index.html | css/style.css | images/ | README.md

6. Evaluation (100 Marks)

HTML & Semantics	10	Flexbox	15	Grid	15
Positioning	10	Responsive Design	20	Transitions & Animations	15
Visual Design & Code Quality	15			**Total**	**100**

7. Submission

Submit the complete project folder and README.md. Upload the project to GitHub and deploy it using Netlify or another hosting platform. Submit both the GitHub repository URL and live website URL. Make sure the deployed site is publicly accessible and mobile-friendly.

Final Check: All sections included • Flexbox and Grid used • Positioning demonstrated • Responsive on all screen sizes • At least one transition and animation • GitHub and deployment links submitted.
