before running
the code

output after
running

```
public static void printNames(String [] names){ 1 usage
    for(String name: names){
        if(name != null){
            System.out.print(name+" ");
        }
    }
}
```

✓ Given <u>String [] names</u>	for (string <u>name</u> : names)	if (name != null)	✓ System.out.print(name+" ")
Case names = { "A", "B", null, "C" }	"A" "B" null "C"	"A" != null F "B" != null T null != null F "C" != null T	<u>skip</u> A A B <u>skip</u> A B C
	<u>out of loop</u>		

index = 0 / 2 →

```
String [] filteredArr = new String[names.length];
int index = 0;

for(String name: names){
    if(name.length() > size){
        filteredArr[index] = name;
        index++;
    }
}

return filteredArr;
```

Input test case 1

names = { "Rakesh", "Deepak", "Punay" }
~~size = 3~~

names =
 size = 4

Given
names =
~~size = 3~~

filteredArr =
 { Rakesh,
Deepak,
Punay }

for (String name: names)

if (name.length() > size)

filteredArr[index] = name
index

"Rakesh"

6 > 5 T
