

HTML Scenario-Based Assignment

Text • Formatting • Anchor/Link • Image Elements

Submission Deadline: 25 August 2026, 11:59 PM

Topics	Text elements, text formatting, anchor/link, image, and their relevant attributes
Assignment Style	Real-world scenario-based problems rather than isolated tag exercises
Expected Level	Correct element selection, attributes, nesting, content hierarchy, links and images
Submission	Push complete solutions to GitHub and submit the GitHub repository link

Important: Build realistic pages, not random tag demonstrations. Use only topics taught so far; do not use CSS or JavaScript.

General Instructions

1. Use the standard HTML structure: <!DOCTYPE html>, html, head, title and body.
2. Use only headings, paragraphs, br, hr, text-formatting elements, anchor/link elements, image elements and attributes taught in class.
3. Do not use CSS, JavaScript, lists, tables, forms, audio/video, semantic layout elements or frameworks.
4. Every image must have a meaningful alt value. Verify that image URLs work.
5. Use meaningful anchor attributes such as href, target, title and relevant rel values where the scenario requires them.
6. Where required, nest inside <a> to create a clickable image.
7. Use meaningful content instead of repeated Lorem Ipsum. Keep indentation clean.
8. Test every page in a browser and push all source files to GitHub before the deadline.

Problem 1: University Information Page

Real-World Scenario: A university needs a simple information page before CSS is introduced. Students should find basic information, images and useful links.

Requirements

1. Use the university name as <h1> and create sections for About, Programs, Campus Life, Admission and Contact.
2. Write meaningful paragraphs under every section and use <hr> between major areas.
3. Use for an important admission message and <mark> for an important deadline.
4. Add a campus image with working src and descriptive alt.
5. Add official website, admissions and student-portal links.
6. Demonstrate appropriate href, target, title and relevant rel values.
7. Use
 where a genuine line break is needed in contact information.

Expected Deliverable: One complete university information page containing text, formatting, images and multiple working links.

Bonus: Make the campus image clickable and link it to the official website.

Problem 2: Breaking News Article

Real-World Scenario: A college media club needs a breaking-news article with a featured image and related links.

Requirements

1. Create a headline with <h1> and subheadline with <h2>.
2. Write at least four detailed paragraphs covering what, where, when and why.
3. Use for the most important fact, for emphasis and <mark> for a date/location/statistic.

4. Add a relevant image with meaningful alt text.
5. Add an external Read More link and an internal Back to Home link.
6. Use suitable anchor attributes, including security/privacy-related rel where applicable.
7. Separate an Editor's Note using <hr>.

Expected Deliverable: A text-first news article with one image and functional internal/external links.

Bonus: Make the featured image a clickable link to the related article.

Problem 3: Student Profile / Digital Introduction

Real-World Scenario: A student wants a shareable profile for classmates, mentors and recruiters.

Requirements

1. Create a profile page with the student's name as <h1>.
2. Add a profile image with accurate alt text.
3. Create About Me, Education, Technical Interests, Career Goal and Contact sections.
4. Use , , <mark>, and <i> purposefully.
5. Create an email link and an external GitHub/profile link.
6. Use title on useful links and appropriate target/rel combinations where required.
7. Use
 for multi-line contact information.

Expected Deliverable: A complete student introduction page with profile image, formatted text and contact/navigation links.

Bonus: Make the profile image a clickable link to GitHub.

Problem 4: Travel Destination Guide

Real-World Scenario: A travel website needs a weekend destination guide with images and useful reference links.

Requirements

1. Choose Agra, Jaipur, Delhi, Goa, Manali or another approved destination.
2. Create at least five sections covering attractions, culture, food, best time and travel tips.
3. Add at least three relevant images, each with meaningful alt text.
4. Use for an important travel tip and <mark> for the recommended season.
5. Link to an official tourism website and at least two attraction/reference pages.
6. Use appropriate anchor attributes taught in class.
7. Make at least one image clickable and link it to a related reference page.

Expected Deliverable: A text-rich travel guide with three or more images and meaningful links.

Bonus: Add a Plan Your Visit section with three useful external resources.

Problem 5: Product Advertisement Page

Real-World Scenario: A startup has launched a product and needs an HTML-only product page before styling.

Requirements

1. Choose a fictional laptop, smartwatch, mobile phone, course or similar product.
2. Create product name, tagline, Overview, Benefits, Pricing, Special Offer and Customer Information sections.
3. Add a product image with meaningful alt text.
4. Use for key benefits and <mark> for the offer.
5. Show original and discounted prices using formatting elements.
6. Add Buy Now and Learn More links, using title where useful.

7. Use appropriate target/rel combinations where required.

8. Make the main product image a clickable link.

Expected Deliverable: A realistic product information page using text, formatting, images and anchor elements.

Bonus: Use two product images and give each a different navigation purpose.

Problem 6: College Technology Festival

Real-World Scenario: The college cultural committee needs a TechFest promotion page with event details, images and registration links.

Requirements

1. Create TechFest 2026 or another fictional event with a strong <h1>.
2. Create sections for Introduction, Highlights, Date/Venue, Speakers and Registration.
3. Use detailed promotional paragraphs.
4. Use for the main announcement and <mark> for the registration deadline.
5. Add at least two event images with correct src/alt.
6. Add registration and official-information links with appropriate attributes.
7. Make at least one event image clickable.
8. Use
 in date/venue information where appropriate.

Expected Deliverable: A complete event promotion page with text, formatting, images and calls to action.

Bonus: Create a clickable event banner that opens registration.

Problem 7: Online Course Information Page

Real-World Scenario: An education company wants a simple course page before CSS/JavaScript are introduced.

Requirements

1. Choose Java, Python, MERN, Web Development, DSA or another taught subject.
2. Create Overview, What You Will Learn, Duration, Instructor, Prerequisites and Enrollment sections.
3. Write meaningful content rather than placeholders.
4. Add an instructor image and course thumbnail, both with useful alt text.
5. Use for benefits and <mark> for a deadline/offer.
6. Add enrollment, syllabus/reference and instructor-profile links.
7. Use anchor attributes taught in class.
8. Make the course banner image clickable.
9. Add a small <pre><code> example if relevant.

Expected Deliverable: A complete course information page combining educational content, images, links, formatting and code display.

Bonus: Use three images and make each serve a different navigation purpose.

Problem 8: Technology Blog Homepage

Real-World Scenario: You are building a text-first technology blog where each article needs a featured image and navigation.

Requirements

1. Create a blog homepage with a meaningful title and <h1>.
2. Create at least three articles, each with a title and multiple paragraphs.
3. Each article must contain a relevant image with accurate alt text.

4. Use `<strong>`, `<em>` and `<mark>` meaningfully.
5. Add Read Full Article links for each post.
6. Add About Author and Visit GitHub links.
7. Use useful title values and appropriate target/rel combinations.
8. Make every featured image clickable.

Expected Deliverable: A multi-article blog homepage with functional navigation and images.

Bonus: Create one article detail page and connect it from the homepage.

Problem 9: Restaurant / Café Introduction

Real-World Scenario: A café wants a basic web presence focusing on content, images and useful links.

Requirements

1. Create a fictional restaurant/café introduction page.
2. Create About Us, Signature Items, Special Offer, Opening Information and Contact sections.
3. Add at least three food/drink images with meaningful alt descriptions.
4. Use `<strong>` for a signature item and `<mark>` for a special offer.
5. Use `<sub>` or `<sup>` only where genuinely appropriate.
6. Add location/map, social/profile and contact links where applicable.
7. Use useful title attributes.
8. Make at least one food image clickable.

Expected Deliverable: A realistic café page with images, formatted text and useful links.

Bonus: Add a clickable restaurant logo linked to the homepage.

Problem 10: FINAL CHALLENGE — School / University Information Portal

Real-World Scenario: An educational institution has asked you to create its first HTML-only information portal. CSS and JavaScript will be added later, so your HTML must provide a strong foundation.

Requirements

1. Create a complete portal for a fictional or real school/university.
2. Use a meaningful `<title>` and strong `<h1>`.
3. Create at least eight sections: About Institution, Principal/Director Message, Academic Programs, Campus Facilities, Student Life, Admission Information, Important Notices and Contact.
4. Use heading levels logically and write substantial paragraphs.
5. Use at least six taught formatting elements, including purposeful `<strong>`, `<em>`, `<mark>`, `<b>`, `<i>` and `<u>`.
6. Include a `<pre><code>` block and meaningful uses of `<sub>/<sup>`.
7. Add at least five images: campus, principal/director, academic activity, facility and student activity. Every image needs meaningful alt.
8. Add at least five external links such as official website, admission portal, student portal, profile/social page or academic resource.
9. Demonstrate href, target, title and relevant rel values correctly.
10. Make at least two images clickable links.
11. Use `<hr>` between major areas and `<br>` only where an intentional line break is appropriate.
12. Do not use CSS, JavaScript, lists, tables, forms, semantic layout tags or frameworks.
13. Organize the complete solution in a GitHub repository with meaningful filenames.

Expected Deliverable: The most complete HTML-only portal you can build at this stage, demonstrating elements, attributes, hierarchy, formatting, navigation and images.

Bonus: Create separate About, Admission and Contact pages and connect them through anchors.

Anchor & Image Attribute Challenge

Because anchor and image attributes have been taught in class, students are expected to demonstrate understanding rather than simply adding attributes mechanically.

Element	Expected concepts	Demonstrate in
<a>	href, target, title, relevant rel values	External links, internal pages, CTA links
	src, alt, and other taught image attributes	Campus, profile, product, event, travel and article images
<a> + 	Image nested inside anchor	At least two clickable images in final challenge
Text	h1–h6, p, hr, br	All problems
Formatting	b, strong, i, em, mark, u, pre, code, sub, sup	Use according to content meaning

Rule: An attribute should be used because it serves a purpose. For example, alt should describe an image meaningfully, while title should provide useful additional context.

Submission Requirements

1. **Deadline: 25 August 2026, 11:59 PM.**
2. Create a GitHub repository, for example html-scenario-assignment.
3. Push all completed problem files before the deadline.
4. Submit the **GitHub repository link** to the instructor. Do not submit only screenshots.
5. Your repository must contain the actual HTML source files for code inspection.
6. Verify all required images load and all required links work before submission.

Evaluation Rubric — 100 Marks

Area	Marks	Evaluation
HTML Structure	10	DOCTYPE, html, head, title, body, nesting and readability
Text & Headings	10	h1–h6, p, hr, br used logically
Text Formatting	15	b, strong, i, em, mark, u, pre, code, sub, sup
Anchor Elements	20	href, target, title, rel and link behavior
Images	15	src, alt, relevant images, working resources
Problem Completion	10	All problem-specific requirements
Code Quality	5	Indentation, meaningful filenames, clean markup
GitHub Submission	10	Complete repository and on-time submission
Professionalism	5	Meaningful content and attention to detail
TOTAL	100	

Final Reminder: Do not try to use every tag on every page. The goal is to choose the correct element and attribute for the correct purpose. Build HTML as if CSS and JavaScript will be added later by another developer.
