

Web Development Foundations

Sample / Practice Question Paper – 2

Mid Term Examination – Practice Paper

Odd Semester 2026–27

Program (Branch), Year, Semester:

Subject Code & Subject Name:

Time: 2 Hours

Maximum Marks: 30

Instructions for Students

1. Attempt all questions.
2. Write syntactically correct HTML/CSS wherever required.
3. Use suitable and meaningful class/id names.
4. Assume reasonable values wherever necessary.
5. Use semantic HTML elements wherever applicable.
6. For CSS questions, write only the essential CSS required to achieve the given result.
7. Clearly mention media queries wherever responsive behavior is required.

Section – A

Attempt All Questions 5 × 3 = 15 Marks

Q1. Semantic HTML – 3 Marks

A **university placement cell webpage** needs a semantic structure containing: A header with the placement cell name A navigation menu containing **Companies, Drives, Eligibility and Contact** A main section with a heading, introductory paragraph and a list of placement services An image representing campus placements A footer Write the essential HTML using appropriate semantic elements and meaningful attributes.

CO2 | BL: A | KL: P

Q2. HTML Form – 3 Marks

Create the essential HTML for a **workshop registration form** that collects: Participant Name Email Address Phone Number Preferred Session using radio buttons Department using a select menu Topics of Interest using checkboxes Suggestions using textarea Submit button Use labels, suitable input types and **required** validation where appropriate.

CO2 | BL: A | KL: P

Q3. CSS Box Model – 3 Marks

A notification panel has a declared width of **360px**, padding of **12px** on each side, a **3px** border on each side, and a margin of **18px** on each side.

- (a) Calculate its total occupied width using the default **content-box** model.
- (b) Write the CSS declaration that makes the declared width include padding and border.

CO3 | BL: A | KL: P

Q4. CSS Grid and Responsive Design – 3 Marks

A **student project gallery** contains eight project cards. Write CSS to: Display the cards in **four equal columns** on screens of 900px and above. Display them in **two columns** below 900px. Use a **15px gap** between the cards. Use CSS Grid and one suitable media query.

CO3 | BL: A | KL: P

Q5. Positioning, Transition and Transform – 3 Marks

A **profile card** contains a small “**Verified**” badge that must stay at the top-left corner of the card. When the mouse is placed over the card, it should move slightly to the right and become a little larger. The effect should be smooth. Write the essential CSS using **relative/absolute positioning**, **transition**, and a suitable 2D **transform**.

CO3 | BL: A | KL: P

Section – B

Attempt All Questions 3 × 5 = 15 Marks

Q6. Scenario-Based HTML Task – 5 Marks

Design the essential HTML structure for a **University Sports Day webpage**. The webpage must contain: A semantic header with the event name. A navigation menu with suitable links. A main section containing: An introductory section about the event A list of sports/events An image of the sports ground A schedule table showing at least three events with time and venue An athlete registration form containing at least **four different input types**. A footer with event/contact information. Use suitable semantic HTML elements and meaningful attributes.

CO2 | BL: C | KL: P

Q7. CSS Layout Task – 5 Marks

Consider the following HTML structure for a **Student Activities Page**:

```
<div class="page">
  <header>Student Activities</header>

  <aside>
    <a href="#">Clubs</a>
    <a href="#">Events</a>
    <a href="#">Achievements</a>
  </aside>

  <main>
    <div class="activity">Music Club</div>
    <div class="activity">Coding Club</div>
    <div class="activity">Sports Club</div>
    <div class="activity">Drama Club</div>
  </main>

  <footer>© University</footer>
</div>
```

Write CSS to:

- (a) Create the overall page using **CSS Grid** with header, sidebar, main and footer areas.
- (b) Arrange the four activity cards using **Flexbox**.
- (c) Apply suitable padding, borders, margins and gaps.
- (d) Use **box-sizing: border-box**.
- (e) Arrange the sidebar links vertically using Flexbox.

Briefly explain the major layout properties used.

Q8. Integrated Responsive Web Design – 5 Marks

A **travel destination webpage** contains a navigation bar and **six destination cards**. Write the essential CSS to: Display the cards in **two columns** on desktop screens. Display the cards in **one column** below **650px** using a media query. Use **Flexbox** to align the content and action button inside each card. Add a smooth hover effect that moves the card upward and slightly enlarges it using **transition** and **transform**. Create a continuous **@keyframes** animation for a small **"Explore"** badge. State the purpose of the major CSS properties used.

CO3 | BL: C | KL: P

Practice Checklist

- Semantic HTML and meaningful attributes
- Navigation, images, lists and tables
- Forms, labels, input types and validation
- CSS Box Model and box-sizing
- CSS Grid and responsive columns
- Flexbox for navigation and card layouts
- Relative and absolute positioning

- Transition and 2D transforms
- Media queries
- @keyframes animation
- Combining HTML and CSS concepts in scenario-based problems
